

Job Description

Senior Developer/Team Leader

Description:

CareGo Technology is the fusion of Value Chain “know how” and cutting edge Microsoft Technology competencies. The synthesis of our expertise has enabled us to create two streams of business: LynxIT Software ...your link to supply chain management solutions...which provides a full suite of supply chain management application software and Solution Services that draw upon our core competencies to provide you with a variety of services leveraging MS .Net, ASP, PLC based and RF based technologies.

Requirements:

CareGo Technology has a requirement for a Senior Developer/Team Leader. The successful candidate will be involved with web based, client-server based, and RF wireless projects. We are looking for a self motivated individual who has a diverse background and brings hands-on experience in development as well as a proven track record of leading a development team. The position will be based out of our Hamilton office but may require some travel as well as working out of remote offices. The Senior Developer/Team Leader must have five or more years of experience with .Net technology (ASP.Net, VB.Net, etc). In addition, the successful applicant will have had exposure and hands-on experience with application and web technologies. Also crucial to this role, you will have had experience with the full software development life cycle, and possess the ability to design, build, test and deploy complex applications. Rounding out the skills required to be considered for this position, you will possess excellent problem solving skills, exceptional communication skills, proven project management skills and hold a Computer Science degree or equivalent work experience.

Qualifications:

Must have a minimum of three years experience in:

- Client-server and web-based applications design and development using Microsoft Visual Studio .NET. MS Framework version 1.1 and some 2.0;
- The design, development, and management of the application life cycle using Microsoft Visual Studio.NET toolset;
- Use of and development of Web Services in a .NET environment;
- Building secure web solutions in a .NET environment;
- Design, develop, and deploying applications based on Microsoft Reporting Services;
- Design, develop, and deploying applications based on Microsoft Sharepoint Portal;
- Design, develop, and deploying applications based on Microsoft Biztalk;;
- Demonstrated ability to design and apply proper quality testing processes;

Required Skills:

- Team or Project lead on at least two projects;
- Strong organization and interpersonal skills with strong focus on customer service;
- Analytical skills and integration skills with excellent problem solving abilities;
- Strong experience in Web development practices and standards;
- Significant experience in doing web development and maintenance;
- Excellent oral and written communication skills when dealing with both technical staff and non-technical staff;
- High level of maturity, confidence, motivation, and the ability to work with a minimum of supervision;
- Ability to successfully work within a cooperative and deliverables-oriented team environment;

Additional experience in the following would be an asset:

- Experience with Microsoft SQL Server configuration and troubleshooting;
- Experience with Microsoft Workflow Framework;
- Experience with Oracle 8i Server configuration and troubleshooting;
- Experience with database administration;
- Formal training in Microsoft Visual Studio .NET;
- Capability to conduct informal training, mentoring, and knowledge transfer in the above technologies;
- Experience in the supply-chain or logistics industry

We would like to thank all applicants for their interest, however, only those candidates under consideration will be contacted.
